DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2,6-8,4, drawn to plate with particular vanes, classified in class 416, subclass 223R.
 - II. Claim 5, drawn to plate with vanes in a housing, classified in class 416, subclass 247R.
 - III. Claims 9-38, drawn to impacter sampler where separation occurs upon impaction upon vanes, classified in class 73, subclass 863.22.
 - IV. Claims 39-55, drawn to method to make an impeller type impacter, classified in class 29, subclass 889+.
- Claim 3 links I and II.
- Claim 1 links I, II and III.

Inventions IV and I-III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the apparatus can be made by providing for a large predetermined gap between housing and vanes.

Inventions III and I,II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed

does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all limitations of I,II are not in I. The subcombination has separate utility such as an impeller for a pump. Note that no weight could be given to intended use in apparatus claims 1-8.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all limitations of II are not in I. The subcombination has separate utility such as an impeller that employs similarly positioned (non-truncated) vanes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
